

Solar is alive with . . .

Copper Cricket™

Solar Hot Water at its Finest

Using the
revolutionary
"Geyser Pumping
Action!"

No pumps,
electricity,
moving parts
or rooftop tanks.

'HOW THE COPPER CRICKET™ WORKS

"The Copper Cricket is what solar always should have been... personally I'd recommend it as the best system on the market."

Amory Lovins
Rocky Mountain
Institute

Like the "perking" of a coffee pot, vapor created by the heating of the Copper Cricket's collector tubes starts the geyser pumping action. This action delivers the water/alcohol mixture from the collector down to the Solar Pad heat exchanger located under the hot water tank. There it is efficiently transferred to the domestic hot water tank, with no moving parts.

THE COPPER CRICKET

- **No outside power required**
- **No moving parts to fail**
- **No maintenance**
- **Freeze-proof.**
- **Nationally certified**
- **10 year warranty**
- **Kit form for easy installation**
- **Low, trim profile**
- **Mounts flush to roof.**
- **No exposed plumbing**
- **Less expensive than electricity, gas or coal**

Geyser-action lifts fluid to upper header pipe

Compact heat-exchanger fits under standard water heater
